Education

2020
April – 2023
September

M.Sc. Informatik

University of Stuttgart

 Stuttgart, Germany

- During this time I had a big interest in *Cloud Computing*
- I was also introduced to *Non-linear Dynamics*
- Master Thesis:

*Investigation of Multistability-affected
Period-incrementing and Period-adding Structures
in a Model of a Power Converter with Symmetry*

(grade: **1.0**)

- Final grade: **1.3**

2017
October – 2021
April

B.Sc. Informatik

University of Stuttgart

 Stuttgart, Germany

- During this time I had a big interest in *Quantum Computing*
- Bachelor Thesis:

Quantum Computing for Smart Energy Optimizations

(grade: **1.3**)

- Final grade: **1.8**

2009 – 2017
July

Abitur

Max-Planck-Gymnasium

 Schorndorf, Germany

- Final grade: **2.4**

Work Experience

2024 – Present **Doktorand**  Fraunhofer ITWM
November  Kaiserslautern, Germany

Mathematical research institute

- Developing simulation tools for district heating networks

2024 – 2024 **Backend-Developer** **mittwald.** Mittwald CM Service GmbH
January – October  Espelkamp, Germany

Webhosting company with focus on agencies

- Development on microservices in Go
- Development on internal libraries in Go to be used with Temporal
- Utilized technologies:
 - Go
 - Typescript/Javascript
 - Kubernetes
 - gRPC
 - Temporal
- Lecturer of a Vim Workshop

2018 – 2022 **Werkstudent**  softwareinmotion GmbH
November – October  Schorndorf, Germany

Embedded systems company (automotive)

- Extension and adjustment of the C unit test framework Unity (Ruby, C, Python, Git)
 - Automatic generation of mocks/stubs
 - Integration in a build environment and rollout in embedded projects
- Development of a tool to start and read runtime measurements on embedded systems (C, CAN, ISO/TP, Qt)
- Creation and configuration of Polyspace projects to execute code analysis including a Polyspace project generator to automate this process
- Extension and runtime optimization of a proprietary architecture analysis tool for C based embedded software (C#, Enterprise Architect API)
 - Automatic layout of component interface diagrams
 - Performance optimization of the architecture synchronization
- Development of a software for the configuration of position sensors (Python, CAN, CANopen)

Languages

German Native

English B2 *based on Abitur alone*

Technical Skills

Programming Languages

- Go
- Python
- Typescript
- Rust
- Kotlin
- GNU Make
- C
- Bash

Front-End

- Vue
- Angular (limited)

Environments

- Linux
- Kubernetes
- Docker

MISC Technologies

- gRPC
- Android
- Event Sourcing
- Forgejo (git forge)

Typesetting

- LaTeX
- Typst (e.g this CV)

Side Projects

2026
June

- Present

unkai — Author, Maintainer

Go test coverage rendering for the terminal and web (HTML). It comes with an action meant for Forgejo repositories. The program is developed for and actively used in the development of the Forgejo project.

2023
February

- Present

Sunangel Project — Author, Maintainer

Weather Apps and other Sources of information give imprecise results for the time of sunset and sunrise. Especially in locations with many hills.

This project aims to provide better solutions.

- Backend:
 - Messaging-based with NATS as the middleware
 - Services written in Rust and Go
- Frontend:
 - Written in Typescript with the Vue framework

2022 – Present **Badradio Android Application** — Maintainer   
September
Listen to “Badradio 24/7 Phonk” on your phone
- Complete rewrite of application in Kotlin

2020 – Present **reSnap** — Author, Maintainer 
November
Take Screenshots of your reMarkable tablet over SSH
- Written in bash

(Last updated: September 2026)
